Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-6, the prior art fails to teach or suggest a Media Access Control (MAC) bus interface that enables communication between a network side block and a system side block, comprising "a data in bus that enables data to be transferred from the network side block to the system side block comprising a third data bus and third set of handshake signals," in combination with other limitations, as specified in the independent claim 1.

Regarding claims 7-14, the prior art fails to teach or suggest a Media Access Control (MAC) interface multiplexor for multiplexing communication signals between a system side block and at least two network side blocks, comprising "a third multiplexor that provides multiplexing of a message out data bus that enables a transfer of message data from the system side block to said at least two network side blocks in response to a third set of handshaking signals received by the third multiplexor, said message data specifying data format information corresponding to a network side block that issues the message data," in combination with other limitations, as specified in the independent claim 7.

Regarding claims 15-22, the prior art fails to teach or suggest a method of transferring data across a Media Access Control (MAC), comprising "searching a transfer message from the receiving side block to the sending side block; asserting a transfer message data request signal from the receiving side block to the sending side block; and issuing a transfer message data transfer signal from the sending side block
